

Space Shuttle Endeavour

Space shuttle Endeavour is a real space shuttle that took astronauts **into space** 25 times! Some people think it looks like an airplane, with wings on both sides and windows in the front.

I will start in the Endeavour Together exhibit. Here, I can **touch** the landing gear and learn about life on the shuttle. There is also a video about how Endeavour got to the California Science Center.

I will then walk outside to another building to see the real space shuttle in the Endeavour Pavilion. Here, I **can walk all around** the outside of the shuttle and under the wings.

The Endeavour Pavilion is one very large room. There may be many other people **looking** at the space shuttle, and it may be loud. I will do my best to stay with the people I came with.

If I have questions, I can ask a **museum volunteer**.
They can teach me many things about Endeavour.
